A TABLE

Of the value of Bullion in *Scots* Money, according to the several Deniers and Grains of Fineness, and the ordinary denominations of Weights, by which Merchants and others may know what Coyned Money they are to get out, when their Bulzeon doth arise above, or fall below the Standart.

The value of Bulzeon, according to the several Deniers of fineness.

Deniers of Fineness	Stone Weight lib.	shil.	pen.	Pound Weight lib.	shil.	pen.	Ounce Weight lib.	shil.	pen.	Drop Weight lib.	shil.	pen.	Grain Weight lib.	shil.	pen.

24	76	7	10 $\frac{99}{100}$	4	15	5 $\frac{93}{100}$	0	5	11 $\frac{61}{100}$	0	0	4 $\frac{47}{100}$	0	0	0 $\frac{12}{100}$

The use of these Tables will best appear by Examples; suppose it were enquired what one is to receive of Coyned Money, when he gives in to the Mint a Stone weight of Silver 8 Deniers fine. In the first Table in the Column marked at the top with Stone weight, and over-against 8 in the Margent you find 611 *l.* 3 *ſ.* 3 $\frac{93}{100}$ *pen.* the Sum desired. So for a Pound weight of Silver 10 Deniers fine, the Merchant is to get out 47 *l.* 14 *ſ.* 11 $\frac{37}{100}$ *pen.* and so of the rest. And one is to receive for two Ounces weight of Silver 11 Deniers fine, the double value of an Ounce weight of the same fineness, which is 3 *l.* 5 *ſ.* 7 $\frac{83}{100}$ *pen.* to wit, 6 *l.* 11 *ſ.* 3 $\frac{66}{100}$ *pen.* the same way ye'l find that for 3 Drop weight of Silver 12 Deniers fine, one is to receive 0 *l.* 13 *ſ.* 5 $\frac{13}{100}$ *pen.* the triple of 0 *l.* 4 *ſ.* 5 $\frac{71}{100}$ *pen.* which is the value of one Drop weight of Silver 12 Deniers fine.

But if the Bulzeon given in to the Mint be of a fineness consisting of Deniers & Grains; For Example, a Stone weight of Silver 9 Deniers 12 Grains fine; seek in the first Table the value of a Stone weight of Silver 9 Deniers fine, which is found to be 687 *l.* 11 *ſ.* 2 $\frac{91}{100}$ *pen.* and to it add the value of a Stone weight of Silver 12 Grains fine found in the second Table (the same way as before in the first) to wit 38 *l.* 3 *ſ.* 11 $\frac{49}{100}$ *pen.* the Sum 725 *l.* 15 *ſ.* 2 $\frac{40}{100}$ *pen.* is the sought value of a Stone weight of Silver 9 Deniers 12 Grains fine. The same method is to be observed in enquiring what one is to receive for any number of Stones, Pounds, Ounces, Drops, and Grains of Bulzeon of any fineness.

The value of the different Weights of Bulzeon of Standart-fineness, is here inserted because of its more frequent use, albeit it might have been (as the rest) easily found, by adding together in the respective Weights the values of 11 Deniers fine and 2 Grains fine.

The Fractions of Pennies in these Tables are all 100 parts, albeit for the most part they might have been of a lower denomination; that being all of the same denomination, they may be more easily added.
